

Your trusted partner for consistent and continuous antibody supply | 1

For more than 43 years, Jackson ImmunoResearch has been a trusted partner to both academic researchers and commercial life science organizations. Our high-quality, cost-effective secondary antibodies, manufactured in the United States at our global headquarters in Pennsylvania, have supported countless scientific and diagnostic innovations.

Recognized for consistent product performance and a dependable supply chain, we are a reliable resource for both academic and commercial researchers at every step, and a strategic collaborator for OEM and IVD manufacturers seeking long-term value and stability. Our comprehensive range of secondary antibodies and conjugates ensures accessibility and performance across diverse applications.

As a lean organization, Jackson ImmunoResearch is uniquely positioned to meet the evolving demands of the life science industry. Our flexible operations allow us to scale efficiently, customize solutions, and respond rapidly to shifting needs, offering seamless integration into your workflows and unwavering support as your research or business grows.

What are the benefits of working with us?

Reliability - We supply some of the world's leading manufacturers and developers in diagnostics and clinical markets, allowing us to understand the requirements of the most demanding projects. We provide secondary antibodies and allied reagents suitable for all immunodetection applications, including Western blot, Confocal microscopy (Immunohistochemistry, Immunocytochemistry, and Immunofluorescence), ELISA, Flow Cytometry, and Electron microscopy.
