

Specializing in  
**Secondary Antibodies  
and Conjugates**

## JIR Secondary Antibodies Go Further

Jackson ImmunoResearch Laboratories, Inc., specializes in the production and conjugation of affinity-purified, secondary antibodies and purified immunoglobulins.

Jackson ImmunoResearch Secondary Antibodies have consistently been used at higher dilutions than competitor products for Western blotting, ELISA, immunofluorescence, and IHC. Independent data published by CiteAb compares JIR Secondary Antibodies against other antibody retailers to reveal that JIR Secondary Antibodies are typically diluted further.

Application	Average antibody dilution		Difference
	All suppliers	Jackson ImmunoResearch	
Western blotting	1:7267	1:10875	50% more with JIR
Immunofluorescence	1:6908	1:9847	43% more with JIR

## Bulk and Custom Services

**Bulk  
Production**

**Custom  
Conjugation**

**Custom  
Cross-  
adsorption**

We can manufacture and supply most standard inventory secondary antibodies in bulk volumes upon request.

The combination of our experience, our focus on Secondary Antibodies and our core principle of manufacturing to the highest quality standards, ensures that customers can be completely confident of product quality, consistency and minimal lot to lot variation over the long-term. These factors contribute to the efficiency of sample evaluations and approval of bulk materials, and to our goal of providing the highest quality of service.

- Over 30 years of experience in a single, highly specialized field; Secondary Antibody manufacture and Conjugation.
- Long-term customer relationships as an established and reliable supplier.
- Fast, efficient customer services.
- Maintaining the highest standards in our research, manufacturing and all operations, which contribute to ensuring guaranteed product quality, long term product consistency and reliable performance.

Jackson ImmunoResearch Laboratories, Inc. is certified by BSI to ISO 9001:2015 under certificate number FM 545248.
